

PORT OF CROMARTY FIRTH: THE LEADING SCOTTISH ENERGY PORT.

One of Britain's most sheltered deepwater ports, Port of Cromarty Firth on Scotland's north east coast can accommodate the world's largest offshore drilling and accommodation units, production vessels, renewable energy structures, subsea vessels and decommissioning projects. The Port is a European leader in subsea construction and drilling rig IRM, having handled 900 subsea vessel and 700 rig visits. The Port is also ideally located for a supply base for North Sea energy projects.

The Cromarty Firth offers:

- Deepest waters in Scotland (up to 50m at chart datum)
- No weather or tidal restrictions
- Laydown space, warehouses and offices
- A locally based, internationally recognised skilled workforce

All of this combines to make the Port of Cromarty Firth a proven destination for your energy projects in the Central and Northern North Sea.
